

NAME

CURLOPT_HTTPGET – ask for a HTTP GET request

SYNOPSIS

```
#include <curl/curl.h>
```

```
CURLcode curl_easy_setopt(CURL *handle, CURLOPT_HTTPGET, long useget);
```

DESCRIPTION

Pass a long. If *useget* is 1, this forces the HTTP request to get back to using GET. Usable if a POST, HEAD, PUT, etc has been used previously using the same curl *handle*.

When setting *CURLOPT_HTTPGET(3)* to 1, it will automatically set *CURLOPT_NOBODY(3)* to 0 and *CURLOPT_UPLOAD(3)* to 0.

DEFAULT

0

PROTOCOLS
